

FEB 24 2010

25. (Currently Amended) A gas injector for supplying process gas to a plasma processing chamber wherein a semiconductor substrate is subjected to plasma processing, the gas injector comprising:

gas injector body of dielectric material and sized to extend in an axial direction through a chamber wall of the processing chamber such that a planar distal end surface of the gas injector body is exposed within the processing chamber, the gas injector body including a bore defined by a cylindrical side wall and an endwall and a plurality of gas passages in fluid communication with the bore, the gas passages adapted to supply process gas into the processing chamber, wherein the gas passages include gas inlets located in the endwall and gas outlets located in the planar distal end surface of the gas injector body with the total area of the gas outlets less than the cross-sectional area of the bore and the gas outlets are sized to inject the process gas at a subsonic, sonic or supersonic velocity;

wherein the gas inlets are closer to a central axis of the bore than the gas outlets and the gas inlets [of the angled gas passages] are located equal distances from the central axis of the bore.

26-27. (Cancelled)

28. (Currently Amended) The gas injector of Claim 25, the gas injector body further includes [passages include] a center gas passage extending in the axial direction [and a plurality of angled gas passages extending at an acute angle to the axial direction].

29. (Previously Presented) The gas injector of Claim 25, wherein the gas injector includes a planar axial end face which is dimensioned so as to be flush with an interior surface of a dielectric window forming the chamber wall.

30. (Previously Presented) The gas injector of Claim 29, wherein the gas injector includes at least one seal adapted to contact the dielectric window when the gas injector is mounted in the dielectric window.

31. (Currently Amended) The gas injector of Claim 25, wherein the gas passages [include a plurality of angled gas passages which] inject process gas at an acute angle relative to a plane parallel to the distal end surface.

32. (Previously Presented) The gas injector of Claim 25, wherein the gas injector is adapted to be removably mounted in an opening in the chamber wall and includes at least one O-ring providing a vacuum seal between the gas injector and the chamber wall.

33. (Previously Presented) The gas injector of Claim 25, wherein the gas injector body includes a surface adapted to overlie an outer surface of the chamber wall.

34. (Previously Presented) The gas injector of Claim 25, wherein the gas injector body includes an annular flange adapted to overlie and contact an outer surface of the chamber wall.

35. (Previously Presented) The gas injector of Claim 25, wherein the gas injector body includes at least one O-ring seal on an outer surface of the gas injector body.

36. (Previously Presented) The gas injector of Claim 25, wherein the gas injector body includes a first O-ring seal on an outer surface of the gas injector body and a second O-ring seal in a surface of a flange extending from the outer surface of the gas injector body.

37. (Cancelled)

38. (Previously Presented) The gas injector of Claim 25, wherein all of the gas passages supply process gas through the distal end surface of the gas injector body.

39. (Previously Presented) A gas injector for supplying process gas to a plasma processing chamber wherein a semiconductor substrate is subjected to plasma processing, the gas injector comprising:

gas injector body sized to extend in an axial direction through a chamber wall of the processing chamber such that a distal end surface of the gas injector body is exposed within the processing chamber, the gas injector body including a plurality of gas passages adapted to supply process gas into the processing chamber and a cylindrical bore adapted to supply gas to the gas passages, the cylindrical bore being defined by a sidewall and an endwall which extends radially inwardly from the sidewall and the gas passages including gas inlets located in the endwall and gas outlets located in the distal end surface, the gas passages including a center gas passage extending in the axial direction and a plurality of angled gas passages extending at an acute angle to the axial direction, wherein the gas inlets of the angled gas passages are closer to a central axis of the bore than the gas outlets of the angled gas passages and the gas inlets of the angled gas passages are located equal distances from the central axis of the bore;

an annular flange having a surface adapted to overlie and contact an outer surface of the chamber wall; and

a first O-ring in the surface of the flange for sealing against the outer surface of the chamber wall.

40. (Previously Presented) The gas injector of Claim 39, comprising a second O-ring seal on an outer surface of the gas injector body.

41. (Currently Amended) A gas injector for supplying process gas to a plasma processing chamber wherein a semiconductor substrate is subjected to plasma processing, the gas injector comprising:

FEB 24 2010

a gas injector body sized to extend axially through a chamber wall of the processing chamber such that a distal end surface of the gas injector body is exposed within the processing chamber, the gas injector body including a plurality of gas passages adapted to supply process gas into the processing chamber, wherein the gas injector body includes a uniform diameter central bore adapted to supply gas to the gas passages, the central bore extending axially from an upper axial end face of the gas injector body, the central bore being defined by a cylindrical sidewall and a planar endwall extending between the cylindrical sidewall and the gas passages include gas inlets located in the planar endwall and gas outlets located in the distal end surface of the gas injector body, the gas passages being sized to inject the process gas at a subsonic, sonic or supersonic velocity, wherein the gas inlets are closer to a central axis of the bore than the gas outlets and the gas inlets [of the angled gas passages] are located equal distances from the central axis of the bore.

42. (Currently Amended) A gas injector for supplying process gas to a plasma processing chamber wherein a semiconductor substrate is subjected to plasma processing, the gas injector comprising:

gas injector body made of a dielectric material selected from the group consisting of quartz, alumina and silicon nitride and sized to axially extend through a chamber wall of the processing chamber such that a planar distal end surface of the gas injector body is exposed within the processing chamber, the gas injector body including a bore defined by a cylindrical sidewall and an endwall and a plurality of gas passages adapted to supply process gas into the processing chamber, wherein the gas passages include gas inlets located in the endwall and gas outlets located in the planar distal end surface of the gas injector body and the gas passages being sized to inject the process gas at a subsonic, sonic or supersonic velocity;

wherein the gas inlets are closer to a central axis of the bore than the gas outlets and the gas inlets [of the angled gas passages] are located equal distances from the central axis of the bore.

43. (Currently Amended) The gas injector of Claim [28] 25, wherein the gas injector body includes 8 of the [angled] gas passages.

44. (Currently Amended) The gas injector of Claim [28] 25, wherein the gas passages extend at an acute angle relative to the axial direction and the acute angle is 10 to 70°.

45. (Currently Amended) The gas injector of Claim [28] 25, wherein the [angled] gas passages direct the process gas such that the process gas does not flow directly towards a substrate being processed.
